The Recovery Enhancement Program

Case Management Level II

SOUTHWORTH ASSOCIATES

For those people who are looking for a more intensive level of care after treatment, we offer Case Management Level II.

Program Overview

The Recovery Enhancement Program (REP) is a program that aids individuals who suffer from addiction and mental health issues on their journey to recovery. REP is designed as an extension of residential treatment that is intended to help clients follow through with their aftercare recommendations.

Case Management Level II is the second and more intensive track in REP. For those looking for a more intensive level of care after treatment, we offer Case Management Level II. The case manager works closely with the client, family members, sponsors, and treatment providers. We can assist with resources, help with financial management, and act as a mediator between the client's family and support network. The program is not limited to only those suffering from a chemical dependency; it is also available to individuals with mental health issues and other process addictions (such as eating disorders, shopping, online gaming, gambling addiction, etc).

What are the Components of a Contract?

Enrollment in REP begins with the following:

- Recommendations from the treatment facility
- Recommendations from the family and/or appointed outside agency
- Participant contact information and personal history
- Releases of confidential health information for anyone who will be involved with their support network and aftercare program

What are the Benefits?

- The program provides a framework to assist the client with following through with treatment center recommendations.
- Promotes both accountability and transparency, which are a critical part of the client's road to recovery. Self-reporting enhances recovery by keeping a participant responsible and active in the process.
- The case manager serves as a liaison between the client and their external support network.
- We provide disclosure of the recovery progress; serve as the mediator of information regarding urine drug screens, meeting attendance, reporting, and follow-up.

If requested, we can provide sober companions for clients who may need intermediary support while coordinating and communicating with multiple family members and treatment providers.

The Program

- **Extensive Aftercare Coordination**
Communication and coordination between therapists, psychiatrists, sober homes, sponsors, and others within the client support network.
- **Individualized Program Goals**
We design a program which focuses on holding each client accountable regarding items pertaining to family mediation, custody issues, probation concerns, and financial management.
- **24 Hour Access to Staff**
All participants are able to contact our Program Coordinator John Southworth, CADC, BRI-II, or our Licensed Social Worker Megan Andrae at their convenience. Travel and on-site visits can be arranged.
- **Regular Progress Reports**
Weekly check-ins from the case manager to the client, family, sponsor, and other treatment professionals involved.
- **Financial Management**
Our case managers can coordinate between clients and their families with bill pay for sober living facilities, personal expenses, and mitigate other recovery activity expenses.
- **International Case Management**
We also have the capability to coordinate a client's drug and alcohol testing, meeting attendance and recovery activities while they are temporarily overseas or are residents of some countries.
